Around the world, an estimated 250 million children under the age of five are failing to meet their developmental potential. Nevertheless, culturally sensitive interventions to promote early childhood development (ECD) are not widely integrated or prioritized in health and education platforms. This interdisciplinary course introduces students to core concepts in ECD, cross-cultural theory, contexts of risk and protection, and early intervention and policy. Course meetings will combine lectures, virtual interviews with global experts, and small-group discussion to equip students with the knowledge and skills to appropriately design, plan, evaluate, and appraise sensitive and specific ECD programming. In particular, the course will introduce students to foundational topics in education and public health – including theories of change, implementation research methods, and the ethics of intervention and cross-cultural work – while supporting the application of these topics to real-world interventions for young children.

Class Notes: **Live/online sessions will be held from 3:45pm - 5:45pm. The class will comprise prerecorded lectures and live sessions with discussion and activities. Additional session will be offered as check-ins for students in diferrent time zones.**

Concepts and Methods for Global Health and Population Studies (190384)

David Canning

2020 Fall (5 Credits) **Schedule:** MW 0200 PM - 0330 PM
F 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 30

This course is intended as a survey of the ideas, data and debates in the study of global health and population. It is organized around three themes. The first theme focuses on population health. It will cover the measurement of health, data sources, and long trends in global health. We will investigate different explanations for long term changes in health and the debate about the major forces driving changes in health. This will include social determinants of health, public health measures, and the role of health systems. The second theme will provide overviews of the main theories of change of population size and composition as well as important facts on levels, trends and differentials of fertility and mortality. This theme will cover theories and empirical findings on the effect of changes in population size and structure, as well as health, on human and economic development. The third theme will be on approaches to measure the effectiveness of interventions and issues around policy setting both internationally and at the national level. Students will be expected to read a number of key texts each week and take part in discussions in the weekly class. Students will also work individually and in groups on weekly homework, reporting on reading, writing essays, or analyzing data to check the relevance of the theoretical ideas covered in the course.

Requirements: **Course Restricted: SD, DPH, DRPH, PHD students only**

2017 Fall (5 Credits) **Schedule:** F 0200 PM - 0330 PM
MW 1130 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 30

This course is intended as a survey of the main perspectives, methods, insights and issues in the study of global health and population dynamics. It is organized around three themes. The first theme focuses on population dynamics and their relationships with population health. It will provide overviews of the main theories of change of population size and composition as well as important facts on levels, trends and differentials of fertility, mortality and migration. This theme will cover theories and empirical findings on the effect of changes in population size and structure on health, and human and economic development. The second theme focuses on collection and analysis of global health data. It will cover both common data

collection methods and important types of analysis in global health. The third theme focuses on the institutions of global health governance, such as WHO, and recurring dilemmas in global health. In each of the three themes, the course will draw on prominent examples of research, intervention and policy in global health, in order to illustrate underlying concepts and methods.

Course Note: Limited to doctoral students, with spaces guaranteed for PhD PHS Global Health students.

Requirements: **HSPH: GHP210**

Management Control in Health Organizations (190385)

Instructor TBD

2014 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 78

This course is designed for students interested in learning about finance and management of health care in low and middle income countries. The focus will be on the development of knowledge and skills that are needed by managers of health care organizations in a variety of settings. It will cover a broad range of topics including cost analysis, budgeting and control, financial analysis, revenue generation, and performance monitoring. While some theory will be presented, this course will emphasize practical

applications of the techniques discussed through the use of the case study method. Although no prior education in financial or managerial accounting is required to take this course, students without any prior training will be expected to do extra work to learn the basics of financial accounting.
Course is mutually exclusive with HPM219 and HPM220. You may not take both this course and any of those courses.

Political Economy of Health Sector Reform (204472)

Kevin Croke

2020 Fall (2.5 Credits) **Schedule:** W 0500 PM - 0800 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This seminar examines how political economy influences the health outcomes and the performance of health systems, with a focus on developing countries. The course begins with a review of several key theories and concepts in political economy, focusing on the strategic interactions between politics and economics in health systems. We examine concepts such as "path dependency" to help understand why some policies and institutions are difficult to change; how political institutions like the type of regime (i.e. degree of democracy or authoritarianism) structure political participation and influence health reforms; and how variation in "state capacity" shapes the ability of countries to implement complex reforms. We show how these theories and concepts can be applied to explain past events and how by taking into account political and economic constraints, they can be used to design more successful programs and health reforms. We review different empirical methods, including quantitative/causal inference and comparative case study methods and use them to test and extend theory. Theories of policy reform are applied to cases such as health sector reform in Mexico and Ghana and other countries based on student interests. The course involves a critical review of theories and the empirical academic literature in order to develop a political economy analysis of a health reform in a country selected by each student. The course is open to doctoral and masters students with a basic understanding of the political economy literature on health systems and interest in applied and academic research. The course builds on materials taught in GHP 244, GHP 269, and GHP 270.

Course Prerequisite: Instructor Permission required – see course note.

Course Note: This course requires instructor permission. Students wishing to enroll in GHP 212 must include the following information when requesting to enroll: name; academic department; degree program; list of courses you have taken in political analysis, political economy, economics and/or health systems; an explanation of how you will benefit from taking this course; and relevance to career path and/or research.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Political Economy of Health Sector Reform (204472)

Thomas Bossert

2017 Fall (2.5 Credits) **Schedule:** W 0530 PM - 0800 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This seminar examines how the political economy context of health systems influences the outcomes or performance of those systems. The course begins with a review of several key theories/concepts in political economy and the strategic interactions of politics and economics in health systems. We examine concepts such as "path dependency" to help understand why some policies are difficult to change; how "political institutions" like the type of democracy or authoritarian government might influence the type of reforms possible; and how weak "state capacity" creates problems when some countries seek to implement complex reforms. We illustrate how these theories and concepts can be applied to explain past events and also to design more successful health reforms by taking into account political, economic, and institutional constraints. We review different empirical methods, including quantitative, comparative case studies and game theory used to test the broader theories, applying them to cases such as health sector reform in Mexico and Ghana and other countries based on student interests. The course involves a critical review of theories and empirical academic literature in order to develop a political economy analysis of a health reform in a country selected by each student. The course is open to doctoral and masters students with a basic understanding of the political economy literature of health systems and interest in applied and academic research. The course builds on materials taught in GHP 244, GHP 269, and GHP 270.

Course Prerequisite: Instructor Permission required – see course note.

Course Note: Students wishing to enroll in GHP 212 must email an essay (maximum half-page) to the course instructor, Thomas Bossert (tbossert@hsph.harvard.edu) by 5:00pm on Monday, October 9, 2017. Applicants will be notified of their status by Wednesday, October 13, 2017. The essay should contain the following information: name; email; academic department; degree program; list of courses you have taken in political analysis, political economy, economics and/or health systems; an explanation of how you will benefit from taking this course; relevance to career path and/or research. Students who have taken GHP 244, GHP 269, and/or GHP 270 will be given preference.

Political Economy of Health Sector Reform (204472)

Thomas Bossert

2017 Spring (2.5 Credits) **Schedule:** W 0330 PM - 0620 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

There is a widely recognized interest in understanding how the political economy context of healthsystems influences the outcomes or performance of those systems. This course begins by helping students gain a comprehensive knowledge of political economy theories/concepts and the strategic interactions of politics and economics. We will examine concepts such as "path dependency" which help understand why reforms are difficult to implement; how "political institutions" like the type of democracy or authoritarian government might influence the type of reforms possible, and how weak "state capacity" helps understand why some countries should not try complex reforms. We then illustrate how these theories and concepts can be applied to explain past events and to design viable and successful reforms by taking into account political, economic, and institutional constraints. We will also review different empirical methods, including quantitative, comparative case studies and game theory used to test the broader theories, applying them to cases such as Mexico and Ghana and others based on student interests. The course will involve a critical review of theories and empirical academic literature in order to develop a concise research question and prepare a research proposal involving a selected empirical research method. The course is open to doctoral and masters students with some understanding of political and economic literature and interest in applied and academic research.

Course Prerequisite: Instructor Permission required – see course note.

Course Note: Prospective students wishing to enroll in GHP 212 must email an essay (maximum half-page) to the course instructor, Thomas Bossert (tbossert@hsph.harvard.edu) by 5:00pm on Monday, January 16, 2017. Applicants will be notified of their status by Wednesday, January 18, 2017. The essay should contain the following information: name; email; academic department; degree program; list of courses you have

taken in political analysis, economics and/or health systems; an explanation of how you will benefit from taking this course; relevance to career path and/or research. Students who have had GHP 244, GHP 269, and/or GHP 270 will be given preference.

Global Cardiovascular Disease Prevention - Methods, Study Designs and Case Studies (204772)

Goodarz Danaei

2020 Summer (2.5 Credits) **Schedule:** MTWRF 0800 AM - 0930 AM

Instructor Permissions: None **Enrollment Cap:** 30

At the end of the course, attendees will be able to use analytical methods (complex survey analysis, regression models, and survival analysis) to examine the population-level exposure to risk factors and the causal impact of interventions on preventing cardiovascular diseases (CVD); they will also be able to critically appraise the literature on CVD prevention worldwide and to design and evaluate interventions to prevent CVD. They will also learn and discuss cases of success and failure in CVD prevention worldwide with a focus on developing countries.

Course Note: Limit to 30 students, Lown Professional Scholars will enroll.

Health, Human Rights, and the International System (190386)

Stephen Marks

2018 Spring (2.5 Credits) **Schedule:** T 0345 PM - 0700 PM

Instructor Permissions: None **Enrollment Cap:** 28

This course is designed to provide an overview of the way international institutions deal with health and human rights issues. Focus will be on the responses of the United Nations system, including the World Health Organization (WHO), regional organizations, and non-state actors to some of the pressing issues of health from a human rights perspective. Issues to be explored include: mother-to-child transmission of HIV and ARV drug pricing in Africa; traditional practices, such as female genital cutting (FGC); forced sterilization and rights of indigenous people in Latin America; accountability for mass violations of human rights; health of child workers; and international tobacco control. Among the international institutions to be examined are the WHO, UNAIDS, the World Trade Organization (WTO), UNESCO, the Council of Europe, the Organization of American States, the World Bank, and the International Criminal Court (ICC). The principal teaching method is simulation of actual cases, in which students prepare and present positions of various protagonists, based on research into those positions. The ultimate aim of the course is to prepare students to work for and interact professionally with international institutions to advance the health and human rights objectives, whether through governmental, intergovernmental or nongovernmental processes.

Students outside of HSPH must request instructor permission to enroll in this course

Foundations in Humanitarian Studies, and Human Rights (190387)

Instructor TBD

2014 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 29

This course will provide students with an introduction to the frameworks and constructs that form the foundation of humanitarian and human rights studies. Lectures, case studies and table top exercise will provide students with an essential understanding of the humanitarian architecture, the historical context for humanitarian response, international humanitarian law frameworks, basic processes of standard setting and interpretation of international human rights norms and operational and policy issues in crisis contexts. The historical evolution of humanitarian action will be explored and emerging issues in the sector will be discussed. Students will develop their capacity to undertake sound policy analysis and suggest practical recommendations on measures to promote the protection of vulnerable groups.

There are no prerequisites for taking the course and it is open to all. This course also serves as part of the core (required) curriculum for the Interdisciplinary Concentration in Humanitarian Students, Ethics and Human Rights.

Global Noncommunicable Diseases (207769)

Lindsay Jaacks

2019 Fall (2.5 Credits) **Schedule:** MW 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 30

The purpose of this course is to expose public health students and practitioners to the issue of global noncommunicable diseases (NCDs). The topics that will be covered include:

• Shared risk factors for NCDs (unhealthy diets, physical inactivity, sedentary lifestyles, tobacco, environmental pollutants and occupational hazards)
• Strategies for primary prevention of NCDs with special emphasis on interventions and policies from low- and middle-income countries
• Global epidemiology of NCDs including obesity, diabetes, chronic kidney disease, hypertension, cardiovascular diseases, respiratory diseases, cancer, and mental health
• Implementation of health services for NCDs in low-resource settings
• NCDs in special populations: children and adolescents, pregnancy, the poorest billion, and in humanitarian crises

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

The Human Consequences of Structural Violence in Latin America (190388)

Instructor TBD

2015 Spring (1.25 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 25

This course will cover the history of violence in Latin America and its devastating legacy in terms of drug wars, human trafficking and gang violence across the region. It will present a range of theoretical approaches to the problem of structural violence and outline policies advanced to counter it. The purpose of the course is to stimulate thinking and discussion about drivers of and solutions to the multifaceted problem of structural violence, from an analysis of inequality and poverty, to an examination of authoritarianism, repression and criminal activity, to an investigation of social exclusion, marginalization and social oppression. By focusing on history, theory, policy, and the role of organized society, students will learn about the key debates, knowledge gaps, effective evidence-based interventions and current challenges in the field. The course methodology will encourage participation through discussion.

The course is relevant and complimentary to many degree programs, but not designed for any one in particular. It will be of particular relevance to professional and graduate students interested in contemporary social justice, public health, humanitarian action and human rights issues in Latin America.

Introduction to Demographic Methods (190390)

Marcia Castro

2020 Fall (2.5 Credits) **Schedule:** MW 0800 AM - 0930 AM
F 0800 AM - 0930 AM

Instructor Permissions: None **Enrollment Cap:** 48

This is an introductory level class on the analysis of mortality, fertility and population change. It is required for all masters' and doctoral students in the department of Global Health and Population. Students are introduced to the core literature in this field through lectures, and assigned readings selected from peer-reviewed journals and textbooks. Together, these provide a graduate-level introduction to the principle sources and characteristics of population data and to the essential methods used for the analysis of population problems. The emphasis throughout is on understanding the key processes, models and assumptions used primarily for the analysis of demographic components. Practical training will be given through a required weekly laboratory session, assignments, and a final examination. Examples presented in class and used in assignments are drawn from several countries, combining both developed and developing in assignments are drawn from several countries, combining both developed and developing world realities.

Course Note: Priority enrollment for GHP-SM2 and doctoral students in GHP. Any remaining seats will be available on a first-come first-serve basis.

Students outside of HSPH must request instructor permission to enroll in this course.

Introduction to Demographic Methods (190390)

Instructor TBD

2014 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 52

This is an introductory level class on the analysis of mortality, fertility and population change. It is required for all masters' and doctoral students in the department of Global Health and Population. Students are introduced to the core literature in this field through lectures, and assigned readings selected from peer-

reviewed journals and textbooks. Together, these provide a graduate-level introduction to the principle sources and characteristics of population data and to the essential methods used for the analysis of population problems. The emphasis throughout is on understanding the key processes, models and assumptions used primarily for the analysis of demographic components. Practical training will be given through a required weekly laboratory session, assignments, and a final examination. Examples presented in class and used in assignments are drawn from several countries, combining both developed and developing in assignments are drawn from several countries, combining both developed and developing world realities.

Population, Health, and Development (190391)

Instructor TBD

2012 Fall (5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 20

The course looks at the interrelationship between health and population on the one hand and economic growth and development on the other. The two key ideas that will be developed will be the role of health as a form of human capital that leads to economic returns both for the individual and at the aggregate level, and that changes in health, longevity and fertility can affect economic growth through changes in life span and life cycle behavior as well population age structure. The feedback from economic growth to changes in health and fertility, and the evolution of development as a multi-dimensional system will also be examined. The course will focus in particular on the methods employed to identify the direction of causality between health and economic development.

The course will require preparation based on the readings each week. For each topic students will be expected to prepare a presentation based on the readings. Those not presenting will be expected to take part in a discussion based on the readings. This will count towards the students mark for class participation. There will be 3 assignments that will give students familiarity with the data sets used in the literature. In addition, there will be a 30 minute mid-term examination and a final 90 minute examination at the end of the course.

Course Note: Some of the readings for the course include formal mathematical models and statistical estimation of relationships. Students are expected to be familiar with ordinary least squares (OLS) estimation.

Prerequisites: BIO210, BIO211, BIO213 or equivilant required (not concurrently). Alternatively, GHP 525 (may be concurrent).

Econometric Methods in Impact Evaluation (190392)

Jessica Cohen

2021 Spring (5 Credits)		**Schedule:**	F 0800 AM - 1115 AM
Instructor Permissions:	Instructor	**Enrollment Cap:**	12

The objective of this course is to provide students with a set of theoretical, econometric and reasoning skills to estimate the causal impact of one variable on another. Examples from the readings explore the causal effect of policies, laws, programs and natural experiments. We will go beyond estimating causal effects to analyze the channels through which the causal impact was likely achieved. This will require that the students are familiar with microeconomic theories of incentives, institutions, social networks, etc. The course will introduce students to a variety of econometric techniques in impact evaluation and a set of reasoning skills intended to help them become both a consumer and producer of applied empirical research. Students will learn to critically analyze evaluation research and to gauge how convincing the research is in identifying a causal impact. They will use these skills to develop an evaluation plan for a topic of their own, with the aim of stimulating ideas for dissertation research. This is a methods class that relies heavily on familiarity with econometrics and microeconomics. These are pre-requisites for the course without exception. The course is intended for doctoral students who are finishing their course work and aims to help them transition into independent research. The aim of this course is to prepare doctoral students in the health systems area of specialization of the Global Health and Population department for the dissertation phase of their research and thus they will be given priority in enrollment. The course is also open to other GHP doctoral students and other doctoral and masters students, conditional on having

adequate training in economics and the course having enough space.

Pre-Requisites: A course in econometrics and a course in intermediate microeconomics are required. While students can get by with just these two subjects, some previous experience with regression analysis and applied economic research will be a huge advantage. Students seeing applied regression analysis for the first time in this course will most likely struggle with the reading.

Course Note: Students interested in taking this course must request instructor permission either by email (cohenj@hsph.harvard.edu) or via my.Harvard. Students will be notified of their status in advance of the first class. Please include the following information in your enrollment permission request: name, academic department, degree program and year, previous courses taken in economics (specify if these were beginner, intermediate or advanced) and econometrics, any previous experience with impact evaluation, and the reason you want to take the course.

Students outside of HSPH must request instructor permission to enroll in this course.

Theories and Methods of Health Politics (190393)

Instructor TBD

2012 Fall (5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 11

This course is designed to help doctoral students develop research studies in the field of health policy, with a focus on political inquiry. The course begins by considering major issues in philosophy of science and what we can know about the world. In subsequent weeks, the course explores basic principles of research design; the advantages and disadvantages of research designs based on aggregateanalysis, small n comparison, and case studies; and debates about how such studies should be conducted. Issues include: how to select cases, how to improve measurement, and how to cope with problems of validity in causal inference. The course examines prominent theories of political analysis in health policy and health systems research, and the roles of theory building and theory testing. There is particular emphasis to analyzing examples of empirical research on health systems. The course includes a discussion of how to write an effective research proposal; as part of the course each student is required to write a short research proposal.

Course Note: Course is intended for second-year GHP doctoral students (and others with permission of instructor).

Course Activities: Each week throughout the fall semester, students are required to read an average of 200 pages, write a 750-word essay, and participate actively in the seminar discussion (3.0 hours). Throughout the semester, students also progressively develop a proposal for new independent research.

Introduction to Economics with Applications to Health and Development (190394)

Margaret McConnell

2020 Fall (2.5 Credits)		**Schedule:**	MW 0200 PM - 0330 PM F 0200 PM - 0330 PM
Instructor Permissions:	None	**Enrollment Cap:**	70

This course provides an overview of the microeconomic theories and concepts most relevant for understanding health and development. Each work of the course will cover basic concepts in economics with an application to health.

It describes how the markets for health and health services are different from other goods, with a particular emphasis on the role of government and market failure. In addition it discusses the theoretical and empirical aspects of key health economics issues, including the demand for health and health services, supply side concerns, health insurance, the provision of public goods, and related topics. The course encourages students to fundamentally and rigorously examine the role of the market for the provision of health and health services and how public policy can influence these markets.

At the completion of the course, you will:

1) Understand the basic intuition of microeconomics models of consumers, producers and welfare.
2) Understand market failures, their implications and solutions.
3) Be familiar with current issues in global health economics around the demand for health and health insurance.
4) Consume, discuss and write about economic studies of health and health care systems.

Priority Enrollment: Course is required for GHP-SM2, MPH45-GH and MPH65-GH. Any remaining seatswill be available on a first-come first-serve basis.

Students outside of HSPH must request instructor permission to enroll in this course.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | GHP SM2, MPH45 GH, MD-MPH45 GH, and PHS GHP

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 8/13/2020 11:00AM – 8/25/2020 11:59PM

Introduction to Economics with Applications to Health and Development (190394)

Margaret McConnell

2017 Fall (2.5 Credits) **Schedule:** MW 0200 PM - 0330 PM
F 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 70

This course provides an overview of the microeconomic theories and concepts most relevant for understanding health and development. Each work of the course will cover basic concepts in economics with an application to health.

It describes how the markets for health and health services are different from other goods, with a particular emphasis on the role of government and market failure. In addition it discusses the theoretical and empirical aspects of key health economics issues, including the demand for health and health services, supply side concerns, health insurance, the provision of public goods, and related topics. The course encourages students to fundamentally and rigorously examine the role of the market for the provision of health and health services and how public policy can influence these markets.

At the completion of the course, you will:

1) Understand the basic intuition of microeconomics models of consumers, producers and welfare.
2) Understand market failures, their implications and solutions.
3) Be familiar with current issues in global health economics around the demand for health and health insurance.
4) Consume, discuss and write about economic studies of health and health care systems.

Students outside of HSPH must request instructor permission to enroll in this course

Sexual and Reproductive Health: A Global Perspective (190395)

Ana Langer

2021 Spring (2.5 Credits) **Schedule:** TR 1130 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 30

This course is designed to provide an overview of sexual and reproductive health (SRH) from a global perspective with a focus on the most disadvantaged populations. The course will cover the most critical topics and dimensions in this field, i.e. historic, conceptual, research, methodological, policy, programmatic, rights, and advocacy. The themes will include the role of the global community in shaping the SRH agenda, sexual and reproductive rights, maternal health measurement and quality of care, unsafe abortion, contraception, adolescents' SRH, women's health along the life course and integration of reproductive healthcare. Gender, social inequalities and rights will be underpinning dimensions along the entire course. Students will be introduced to the core SRH literature and learn about the outstanding debates, acute knowledge gaps, effective evidence-based interventions, progress, current challenges and the most promising public health approaches to overcome them. This course will be fully participatory. Students are expected to reflect on readings, lead discussions, prepare group or individual case studies and prepare assigned homework.

Students outside of HSPH must request instructor permission to enroll in this course

Behavioral Economics and Global Health (190397)

Margaret McConnell

2021 Spring (2.5 Credits) **Schedule:** TR 0200 PM - 0330 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

This course provides an overview of behavioral economic theory and surveys the most recent evidence in behavioral economics applied to global health. The course will introduce students to the process of defining and diagnosing challenges in global health policy that are rooted in human behavior. They will also learn how to design solutions to these problems using principles from behavioral economics and rigorously test those solutions in applied settings.

Behavioral Economics and Global Health (190397)

Margaret McConnell

2020 Spring (2.5 Credits) **Schedule:** TR 0200 PM - 0330 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

This course provides an overview of behavioral economic theory and surveys the most recent evidence in behavioral economics applied to global health. The course will introduce students to the process of defining and diagnosing challenges in global health policy that are rooted in human behavior. They will also learn how to design solutions to these problems using principles from behavioral economics and rigorously test those solutions in applied settings.

Prerequisites: HPM206 or equivalent; GHP525 or equivalent

Course Note: Instructor permission is required

Requirements: **HSPH: GHP237**

Conducting Negotiation on the Frontlines (216357)

Claude Bruderlein

2020 Fall (2.5 Credits) **Schedule:** T 1130 AM - 0100 PM

Instructor Permissions: Instructor **Enrollment Cap:** 35

For over a century, public health has provided a solid scientific framework to assess the causes and consequences of harmful policies and behaviors endangering the health of populations. Through the design of evidence-based pathways to improve health outcomes, it has contributed significantly to human development and the realization of the universal right to health. Yet, in an increasingly divided world, health

policy professionals have been confronted with the growing politicization of health policy debates, including ongoing attempts to question or limitthe influence of science in government policy making. These challenges have been particularly visible in crisis situations such as the response to the COVID-19 pandemic or the latest hurricanes affecting large numbers of people and communities. The same challenges have affected the design of public health programs towards vulnerable groups such as migrants, women and children in humanitarian situations across the world. To fulfill their role in these politicized environments, public health professionals must develop capabilities to lead constructive dialogues with a wide range of stakeholders while searching for realistic compromises on policy options. Such capabilities involve the ability of building trust in a tensepublic arena and mitigating adversarial relationships with actors opposed to the proposed policies. Engaging successfully with these counterparts is becoming a critical skill in current and future health crises.

Through an experiential learning approach, the course will present a systematic methodology to engage in crisis negotiations in a proactive, critical, and practical manner. Based on several years of empirical research on negotiation practices on the frontlines of conflict, health crisesand natural disasters, it will offer practical tools to plan such negotiation as well as facilitate learning through the experience of seasoned practitioners working in these complex environments. It will complement existing courses on public policy and leadership for those planning to work in high-intensity environments such as the current pandemic, climate crisis, natural disasters, armed conflicts and other critical situations.

Class Notes: **Instructor permission is required for this course. Students interested in taking the course should fill out the information form here: https://docs.google.com/forms/d/e/1FAIpQLSdaoQMoLb-NGWwa2A_XvPAm3Qj6EEf2JxM0ckfYhnnKThcc3g/viewform and submit an instructor permission request. Upon being selected for the course, your petition will be approved and you will be able to finalize your enrollment in the course.**

Health Sector Reform: A Worldwide Perspective (190398)

Thomas Bossert

2020 Fall (2.5 Credits) **Schedule:** TR 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 67

This course is designed to give students an in depth understanding of health systems, and processes to reform them, using examples from middle and low-income countries. It presents two of the leading analytical frameworks for the analysis of health systems: the Harvard/World Bank "Flagship Approach" and the WHO "Building Blocks" approach. It first focuses on the broad objectives of health systems in these two approaches and presents some of the matrixes used to measure them. It also provides analytical tools for addressing ethical and political issues about health reform. It introduces the concepts of "control knobs" and "building blocks" for developing appropriate options to reform the systems in policy areas of financing (including tax and insurance based systems), payments to providers, organizational changes like decentralization and use of private sector, as well as human resources strategies and technological transitions. The course involves case studies, class discussion and lectures, and review of academic

literature and international and governmental reports. The mid-term and final papers provide guidance in making strong analytical and logical arguments to apply the framework concepts to the health system of a country chosen by each student.

Students outside of HSPH must request instructor permission to enroll in this course

Thomas Bossert

2017 Fall (2.5 Credits) **Schedule:** TR 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 67

This course is designed to help students understand health systems, and processes to reform them, in middle and low income countries. It presents a purposeful framework for the analysis of why health systems are not able to achieve broad objectives such as health status improvement, financial risk protection and patient satisfaction, as well as greater access to services with better quality and more efficiency. It introduces the concept of control knobs for developing appropriate options to reform the systems in policy areas of financing (including tax and insurance based systems), payments to providers, organizational changes like centralization and use of private sector, regulations and persuasion through social marketing. It also includes attention to ethical choices and to political feasibility of reform options. The course involves case studies, class discussion and lectures and mid-term and final papers that apply the framework concepts of a country chosen by each student.

Health Sector Reform: A Worldwide Perspective (190398)

Instructor TBD

2012 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 67

This course surveys the impact of the global movement to reform national health care systems in the lower and middle income countries. It introduces a framework for analyzing health care systems and designing strategies for system reform, including political dimensions, with specific references to developing countries. It then examines some of the major elements of reform strategies as they are being applied in these countries, including goal-setting, financing, the organization of health care and the role of the private health sector, governmental reform, regulation, and change in consumer behavior. Studies and case material from many different countries are used.

Financing and Delivery of Health Care in Developing Countries (190399)

Peter Berman

2017 Spring (2.5 Credits) **Schedule:** MW 0130 PM - 0320 PM

Instructor Permissions: None **Enrollment Cap:** 45

This course seeks to familiarize students with the major approaches to health care financing and delivery currently prevalent in developing countries. Approaches to financing and delivery can be studied as ideal types, but in reality they exist in countries with many variations and combinations. This course, then, also provides a cross-country comparative perspective on the range and composition of financing and delivery arrangements in different countries. To develop students abilities to critically analyze these different arrangements and their possible impact on health system performance, the course begins with a review of

health systems frameworks and theories and concepts, primarily from economics, that provide a foundation for further analysis.

Prerequisites: GHP244 and GHP230, or HPM206, or permission of instructor. Courses may be taken concurrently.

Requirements: **HSPH: GHP245**

HIV Interventions: Rationale, Design, and Evaluation (190402)

Christopher Sudfeld

Kenneth Mayer

2020 Fall (2.5 Credits) **Schedule:** TR 0530 PM - 0700 PM

Instructor Permissions: None **Enrollment Cap:** 25

This course introduces students to the underlying theories, mechanisms and rationales for the major biological, behavioral and structural HIV prevention interventions, such as male medical circumcision, vaccination, female microbicides, treatment as prevention, counseling, and combined approaches. In addition to HIV prevention, the course covers HIV treatment, care and impact mitigation. The focus of the course will be both on developing countries and on high-risk, vulnerable and underserved populations in developed countries. Students will learn to critically analyze studies evaluating HIV interventions and to assess global and national HIV strategies.

HIV Interventions: Rationale, Design, and Evaluation (190402)

Christopher Sudfeld

Kenneth Mayer

2018 Fall (2.5 Credits) **Schedule:** TR 0530 PM - 0700 PM

Instructor Permissions: None **Enrollment Cap:** 25

This course introduces students to the underlying theories, mechanisms and rationales for the major biological, behavioral and structural HIV prevention interventions, such as male medical circumcision, vaccination, female microbicides, treatment as prevention, counseling, and combined approaches. In addition to HIV prevention, the course covers HIV treatment, care and impact mitigation. The focus of the course will be both on developing countries and on high-risk, vulnerable and underserved populations in developed countries. Students will learn to critically analyze studies evaluating HIV interventions and to assess global and national HIV strategies.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | PHD PHS GHP

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 08/16/2018 01:00PM – 08/28/2018 11:59PM

Wave 2 | 08/29/2018 12:00AM – 08/30/2018 11:59PM

Wave 3 | 08/31/2018 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending

no time conflicts)

*****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course***

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Models of Complex Systems in Biology and Public Health (190403)

Instructor TBD

2015 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 25

This course examines complex models as a basis for analyzing biological and social phenomena relevant to public health. Applied topics include: spread and maintenance of infectious diseases such as AIDS, lyme disease and malaria; diffusion bioassays for determining toxicity and mutagenicity of drugs; screening for breast cancer; blood screening, enzyme kinetics; demographic modeling and population structures.

Methodological topics include differential equations, difference equations, probability, Leslie matrices, fitting models to data and computer simulation.

Emerging Issues in Humanitarian Response and Human Rights (205597)

Phuong Pham

Michael VanRooyen

2020 Fall (1.25 Credits) **Schedule:** W 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 45

The course will provide an introduction to the foundational frameworks and constructs for humanitarian and human rights research and action. The course will prepare students to understand and engage in humanitarian response and human rights protection, while examining emerging critical challenges that have multi-dimensional global impacts. These issues include armed conflict, social oppression, climate change, famine, migration, ethnic and other forms of discrimination, and gender-based violence. The major options for protection and support- including early warning, prevention, and mitigation strategies - will be analyzed through case studies and discussion of current research findings, and through the lenses of the norms, actors, and processes of international humanitarian and human rights law, operations, and policy.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Grant Writing for Funding of Research and Health Care Projects (190404)

Karin Dumbaugh

2020 Spring (2.5 Credits) **Schedule:** MTWRF 0800 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 20

In this course participants develop their own proposal for basic or applied research or for a business plan in health that improve knowledge, the delivery of care or other health related activities. The instructor and guests act as catalysts and knowledge resource. The proposed projects serve as case material for faculty and class participants to prepare relevant, productive, and fundable proposals that will advance the participants professional development and health, nationally or internationally.

The objective of the course is to provide participants with two tools to advance in their profession:

1) a grant proposal or business plan and other useful tools for professional growth within their work on their degree(s) and/or their search for academic or other positions;
2) an approach to identify problems or ideas for which they are most likely to find solutions because of their own experience, expertise, and passion.

This course guides you with a) strategies and examples to prepare a realistic and fundable grant proposal for submission to a funding agency upon completion of the course; b) a framework that you can adapt for writing future proposals for basic or applied research, or for projects that deliver services or care, including business plans; c) approaches and assistance to obtain mentor support for your work; d) strategies to find the most relevant sources of information about organizations that fund such work, e) practice opportunities to use course products, such as the proposal, quad chart, timeline, budget, and presentation as tools for professional growth and presentations/interviews for academic and other positions.

Wafaie Fawzi

2017 Spring (2.5 Credits) **Schedule:** MTWRF 0900 AM - 1230 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

The objective of the course is to provide participants with: 1) the opportunity to prepare a fundable grant proposal for submission to a funding agency upon completion of the course; 2) a framework that enables participants to write realistic and fundable proposals for basic or applied research, or for projects that deliver services or care. (Participants are required to obtain support from a mentor for their proposal before, during, and after the course); and 3) the most relevant sources of information about organizations that fund such work.

Course products, such as the proposal, quad chart, timeline, budget, and presentation are also useful tools for professional growth and presentations/interviews for academic and other positions.

Course Note: Submission of concept paper requirement will be discussed at a mandatory organizational meeting on Wednesday, October 12, 2016. By Friday, November 18 interested students must submit a 200 word (two short paragraphs) description of their idea for a proposal for review to kdumbaug@hsph.harvard.edu with phone number where the student can be reached for discussion of proposed project idea. Selection of participants will be based on the order in which students submit and review their concept paper with the instructor. Selection will start in late November.

Course grading: 30 % class discussion, 20 % class presentation, 50% draft proposal.

Class Notes: **Course Schedule: Jan 9 - 20, 2017 with no class on January 16 due to holiday**

Ethics of Global Health Research (190405)

Richard Cash

2021 Spring (2.5 Credits) **Schedule:** MW 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 50

This course is designed to expose students to the key ethical issues that may be encountered in the course of conducting global health research. Using case presentations and discussion-based class sessions, students will have the opportunity to begin developing their own tools for dealing with these important issues in an applied context.

Course Note: Required for GHP SM2 research students.

Course is Restricted: GHP SM2 research students. Seats will be made available to other students if room is available.

Students outside of HSPH must request instructor permission to enroll in this course

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | SM2 GHP, MPH45 GH, MD-MPH45 GH, PHS GHP

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/7/2021 11:00AM – 1/19/2021 11:59PM

Richard Cash

2019 Spring (2.5 Credits) **Schedule:** MW 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 45

This course is designed to expose students to the key ethical issues that may be encountered in the course of conducting global health research. Using case presentations and discussion-based class sessions, students will have the opportunity to begin developing their own tools for dealing with these important issues in an applied context.

Course Note: Required for GHP SM2 research students.

Course is Restricted: GHP SM2 research students. Seats will be made available to other students if room is available.

Students outside of HSPH must request instructor permission to enroll in this course

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | SM2 GHP, PhD PHS GHP-PFH, MPH45 GH, MPH65 GH

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/10/2019 01:00PM – 1/15/2019 11:59PM

Wave 2 | 1/16/2019 12:00AM – 1/17/2019 11:59PM

Wave 3 | 1/18/2019 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **HSPH: HSPH Degr + PHD Stu**

Additional Course Attributes:

Practicum and Culminating Experience for Global Health (204469)

Jesse Bump

2017 Fall (2.5 Credits) **Schedule:** M 0530 PM - 0700 PM

Instructor Permissions: None **Enrollment Cap:** 12

The capstone course is mandatory for all MPH65-Global Health students, as part of the practicum and culminating experience requirement. The course is a forum for discussing the main features and challenges of the global health profession. Particular emphasis is given to analyzing, synthesizing, and sharing important aspects of the field experience. This exercise supports a community of learning and helps develop the communication skills—oral, written, visual, and listening—needed for success in public health.

The main elements of the capstone are:

a. The global health practice experience, which can be developed either by students themselves or by Harvard Chan faculty and staff and includes project travel and/or work during the summer. For all projects,

a minimum 300 documented work hours is required.

b. The preparation of a final paper during the capstone course that includes both a description of the global health project undertaken as well as the lessons gained from the experience.

Course sessions will be held during Fall of the second year.

Course Note: Restricted to MPH65 Global Health students.

Requirements: **HSPH: GHP266**

Field Experience in Health and Human Rights (190407)

Instructor TBD

2013 Spring (1.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 15

In this course, students will acquire the basic skills in applying a human rights framework to health issues in a professional work environment. Depending on their field placement, they may learn about operational skills in settings where health and human rights are practiced or about organizing a study to investigate human rights conditions affecting health. Each student will be expected, in consultation with the instructor, to identify an organization engaged in relevant work for the Winter Session period and secure a placement within that organization. Students are expected to attend a short preparatory workshop in the Fall 2 quarter. Participants will study materials pertinent to their placement and project before heading to the field assignment. After completion of their field work, each student is required to hand in a 10-page paper to be graded by the course instructor on a pass/fail basis.

Course Note: Contract with department required; attend a short workshop in Fall 2.

The Political Economy of Global Health (190408)

Jesse Bump

2021 Spring (2.5 Credits)		**Schedule:**	MW 0945 AM - 1115 AM
Instructor Permissions:	None	**Enrollment Cap:**	67

This course presents theoretical perspectives, empirical cases and research issues in policy analysis and political economy in global health. The focus is on analytical and methodological issues. The main purpose is to examine the political economy constraints on national and global health initiatives, the role of international agencies, the impact of non-governmental organizations, and the role of the state.

Course Activities: All students will be expected to participate actively in class discussions and submit three assignments. Doctoral students in GHP must write a final paper; master's students and non-GHP doctoral students have the option to either write a final paper or complete a take-home final exam. Exams and papers will constitute 80% of the grade and class participation 20%.

Prerequisites: There are no prerequisites for this course.

Students outside of HSPH must request instructor permission to enroll in this course

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Knowledge and Research Design in Global Health (203318)

Michael Reich

2020 Fall (2.5 Credits) **Schedule:** W 0345 PM - 0700 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This course examines how knowledge and research are generated and used in the field of global health. The course begins by considering major issues in epistemology and the philosophy of science concerning what we can know about the world, including a discussion of discipline-based and interdisciplinary approaches. In subsequent weeks, the course explores basic principles of research theory, with attention to the advantages and disadvantages of research designs such as aggregate analysis, small n comparison, and case studies. In these areas, both quantitative and qualitative approaches are covered. Issues include: how to apply theories, how to select cases, how to improve measurement, and how to cope with problems of validity in causal inference.

The course is intended to help students understand the strengths and weaknesses of different research methods to assist them in designing research studies and interpreting and using published research papers. The course emphasizes the development of a critical assessment of published papers in global health.

The course includes a discussion of how to write an effective research proposal; the course is primarily intended to help doctoral and MS students in Global Health and Population with the design and writing of their thesis proposals as well as DrPH students with the design and writing of applied research proposals.

Requirements: **Students outside of HSPH must request instructor permission to enroll**

Course Application Requirements

Prospective students wishing to enroll in GHP270 must email a written application to the course instructor, Prof. Michael Reich (reich@hsph.harvard.edu) by Friday, August 30, 2019. Students will be notified by Tuesday, September 3, 2019. Applications completed after August 30, 2019, will be reviewed on a rolling basis (decisions will be made in the order that the applications are received).

The written application should include the following:
o Name
o Degree program, and remaining time to graduation
o Why do you want to take this course? (max 250 words)
o What do you hope to learn from this course? (max 250 words)
o Briefly describe your research topics of interest (max 250 words)

Knowledge and Research Design in Global Health (203318)

Michael Reich

2018 Fall (2.5 Credits)		**Schedule:**	W 0345 PM - 0700 PM
Instructor Permissions:	Instructor	**Enrollment Cap:**	15

We would like to edit the course description to:
This course examines how knowledge and research are generated and used in the field of global health. The course begins by considering major issues in epistemology and the philosophy of science concerning what we can know about the world, including a discussion of discipline-based and interdisciplinary approaches. In subsequent weeks, the course explores basic principles of research theory, with attention to the advantages and disadvantages of research designs such as aggregate analysis, small n comparison, and case studies. In these areas, both quantitative and qualitative approaches are covered. Issues include: how to select cases, how to improve measurement, and how to cope with problems of validity in causal inference.

The course is intended to help students understand the strengths and weaknesses of different research methods to assist them in designing research studies and interpreting and using published research papers. The course emphasizes the development of a critical assessment of published papers in global health.

The course includes a discussion of how to write an effective research proposal; the course is primarily intended to help doctoral and MS students in Global Health and Population with the design and writing of their thesis proposals as well as DrPH students with the design and writing of applied research proposals.

Class Notes:

Course Application Requirements

Prospective students wishing to enroll in GHP270 must email a written application to the course instructor, Prof. Michael Reich (reich@hsph.harvard.edu) by Friday, August 31, 2018. Students will be notified by Monday, September 3, 2018. Applications completed after August 31, 2018, will be reviewed on a rolling basis (decisions will be made in the

order that the applications are received).

The written application should include the following:
o Name
o Degree program, and remaining time to graduation
o Why do you want to take this course? (max 250 words)
o What do you hope to learn from this course? (max 250 words)
o Briefly describe your research topics of interest (max 250 words)

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Additional Course Attributes:

Global Health & Population 272 Section: 1

Foundations of Global Health and Population (190409)

David Bloom

Joel Lamstein

2020 Fall (5 Credits) **Schedule:** MWF 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 37

This course is required for all incoming master of science students in GHP. It is intended as a broad survey of the main facts, issues, perspectives, methods, results, and conclusions in the areas of global population and health.

The course is organized into three blocks. The first block deals with theory, methods, and evidence related to the state of global health and population and reviews salient population and health issues, both past and present. The focus is on patterns and trends in morbidity, mortality, fertility, and reproductive health, as well as the size, structure, and growth of population. Environmental concerns linked to health and population are also addressed.

The second block deals with the economic, social, legal, political, and ecological context in which global health and population issues arise and must be addressed. This block introduces economic, political, and rights-based perspectives on the place of health in the process of international development.

The third block covers approaches to the design and implementation of policies and programs to address health and population problems. Medical interventions, non-medical health interventions, and non-health interventions will all be considered.

Course is Restricted: SM2 research students in the department of Global Health and Population. Seats will be made available to other students only if room is available.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | GHP SM2

Wave 2 | GHP SM2

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 8/13/2020 11:00AM – 8/25/2020 11:59PM

Wave 2 | 8/26/2020 12:00AM – 8/27/202011:59PM

Wave 3 | 8/28/2020 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Issues in Health and Human Rights (190412)

Stephen Marks

2020 Fall (2.5 Credits) **Schedule:** TR 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 32

The aim of this course is to introduce students to the application of the human rights framework to a wide range of critical areas of public health. Through lectures, cases and guest speakers, students will become familiar with the human rights perspective as applied to selected public health policies, programs and interventions. The course clarifies how human rights approaches complement and differ from those of bioethics and public health ethics.

Among the issues to be considered from a human rights perspective are the bioethics, torture prevention and treatment, infectious diseases, violence prevention and responses, genetic manipulation, access to affordable drugs, community-based health management and financing, child labor, aging, and tobacco control.

Course requirements are active participation in class discussion (25%), presentation of a paper (10%) and quality of the term paper (65%).

Requirements: **HSPH: HSPH Degr + PHD Stu**

Concepts and Methods for Analyzing Health System Quality (214510)

Margaret Kruk

2021 Spring (2.5 Credits) **Schedule:** R 0345 PM - 0645 PM

Instructor Permissions: None **Enrollment Cap:** 12

The objective of the course is to develop students' understanding of key concepts in the measurement of health system quality, and theoretical underpinnings and effectiveness of strategies for health system improvement. The course will review the conceptual frameworks of quality of care and apply these to current and new approaches to measuring quality. It will critically review past and current approaches to the improvement of health system quality. While the course will focus on lower-income countries, it will

cite the US and other OECD country experience. Upon completion of the course, students will be able to identify the key constructs underpinning health system quality, patient experience, and confidence. They will be able to discuss best practices and innovations in the measurement of health system quality and identify data sources for quality measures. They will be able to identify and critique more and less successful approaches to improvement using the lens of complex adaptive systems. Students will identify research and evaluation challenges for studying health system change. Finally, students will apply these concepts to and challenges to a country setting in their final paper by using secondary data and the research literature to assess health system quality and identify potential drivers of performance. This is a doctoral-level seminar course that will include lectures and student-led discussion.

Requirements: **PHS 2000 (or equivalent) is required, or instructor permission. GHP 210 Concepts and Methods of Global Health and Population and GHP 202 Comparative Health Systems Part 1 are strongly recommended.**

Research Methods for Health System Analysis (216216)

Kevin Croke

2021 Spring (2.5 Credits) **Schedule:** MW 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 20

This course is designed to help students learn about methods for health system research. The study of health systems differs methodologically from the study of population health in important ways. Health systems are large, complex, interactive systems. As such, the methods used for inference and analysis in population health (randomized controlled trials, and observational empirical studies that seek causal inference by seeking to approximate the RCT model) are often – although not always -- challenging or impossible to apply. Understanding variation in health system performance across countries, regions, and time therefore requires that researchers learn how to apply a range of research methods, often spanning multiple social science disciplines.

The first half of the course will introduce the methods for qualitative, comparative analysis of health systems, from research design to fieldwork. The second half of the course will focus on statistical methods, including cross-country regressions, multi-level models, and program evaluations of health system topics. The focus in these sessions will be on how valid empirical designs can be generated and implemented despite the complex nature of health systems. In both cases, the focus is both on the intellectual tools required but also the practical implementation of such research. For qualitative cross country work, this means extensive discussion of fieldwork and qualitative research methods. For empirical work, the course includes a replication exercise to gives students direct exposure to high quality published work.

This course is likely to be especially relevant to doctoral students in the Department of Global Health and Population Health Systems Area of Specialization.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Individual and Social Responsibility for Health (190414)

Daniel I. Wikler

2020 Fall (2.5 Credits) **Schedule:** TR 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 25

This course serves as an introduction to ethical issues in the practice of public health, with particular emphasis on those involving individual health-related choices.

Our goals:

- **Identify and articulate the ethical dimensions of decisions arising in the practice of public health.**

- **Contribute to the resolution of ethical dilemmas arising in the practice of public health through logically rigorous and evidence-based ethical reasoning.**
- **Examine the bases for ascription of responsibility for health to individuals, to society, and to others whose actions influence health.**

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Individual and Social Responsibility for Health (190414)

Daniel I. Wikler

2017 Fall (2.5 Credits) **Schedule:** TR 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 20

The concept of responsibility for health plays a key role in health policy, but it is rarely articulated or evaluated. In this course, students will consider alternative understandings of assignments of responsibility for health to individuals, the state, the family, communities, nonprofit and for-profit firms, and other entities. They will identify their occurrences in health policy debates, assess the cogency of their use in ethical arguments in health policy, and trace the policy consequences of their normative analyses. The course will also serve as an introduction to ethical perspectives on public health.

Requirements: **HSPH: HSPH Degr + PHD Stu**

The purpose of this course is to expose public health students and practitioners to the topic of the epidemiological and nutrition transitions in rapidly developing countries. The course includes extended field visits to various institutions/sites that are dealing with agriculture, nutrition, and the provision of health care to address the growing non-communicable disease (NCD) burden in Nepal. The topics that will be covered include the following:

• Epidemiological transition and global burden of non-communicable diseases (NCDs)
• Underlying causes of the epidemiological transition, with a particular emphasis on the nutrition transition
• Implementation of health services for NCDs in Nepal
• Strategies for improving the sustainability and healthfulness of food systems in Nepal and other low- and middle-income countries

• Roles within and outside the health sector in policy reform to improve public health

Field Trip: Health Reform and Community Medicine in Chile (190416)

Thomas Bossert

2021 Spring (2.5 Credits) **Schedule:** MTWRF 0900 AM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 25

Chile has been in the forefront of major new issues related to health systems and inequality. First, most Chilean observers were surprised by the massive social protests in October 2019 that challenged the view that Chile was progressing in reducing poverty and increasing equal access to health care for the poor and vulnerable populations. Some of the lessons from Chilean protests may be appropriate for the current Black Lives Matter protests around the world.

Secondly, in the face of the COVID-19 pandemic, Chile seemed initially to have applied the best practices for containing COVID-19 but never fully implemented them and opened the economy too soon, resulting in one of the worst indicators of the pandemic in Latin America.

This year's course is likely to be an online "field experience" that will have Zoom interviews with key officials and observers of the Chilean health sector and partnerships with Chilean family medicine residents who will help us understand the Chilean context from the point of view of practitioners starting out in their careers. We will also have videos of Santiago and rural areas in Chile to get a feel for the context and to replicate as much as possible a "field experience".

Chile has also been an innovator of health sector reforms and has been a model for several countries around the world. We will have Zoom interviews with many participants in the health system to get their views on the protests, COVID-19 situation and the broader options for health reform. We will also attempt to have Zoom or videos of Chile's initiatives in primary care including an important public private partnership and the development of a family medicine approach to community health care.

Given the difficulty of sustaining full days on Zoom, we expect to arrange to have live sessions together in the mornings for interviews and lectures and have group work (in groups including the Chilean residents) on cases or recorded lectures in the afternoons during the three week course.

During the first two weeks, we will interview key actors in the health system and arrange Zoom visits to clinics and hospitals and the Chilean Congress. During the last week, students will have a chance to do independent work or a practicum on topics of their own interest.

The course requires a presentation and a brief paper on individual research into one of the topics of the course. Some students gain additional credit through an independent study in the spring term following the course.

Course Note: Enrollment will be online and there may be a limit imposed by the practicalities of interaction on Zoom.

Field Trip: Health Reform and Community Medicine in Chile (190416)

Thomas Bossert

2020 Spring (2.5 Credits) **Schedule:** MTWRF 0900 AM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

The Chile course offers a chance to learn about an innovative health system that has been a model for several countries around the world and to observe Chile's initiatives in primary care including an important public private partnership and the development of a family medicine approach to community health care. During the first two weeks, we will interview key actors in the health system and visit clinics and hospitals to learn about:

• their innovative health insurance system which involves both public and private insurance

• their experiment in public private partnerships for delivery of primary care (the Ancora Clinics, written up as a Harvard Business School teaching case)

• the challenges of implementing a family medicine approach in primary care clinics

• how municipal governments manage the decentralized primary care systems in urban and rural settings.

• the challenges of both public and private hospitals in Santiago

• legislative initiatives of the Congress in Valparaiso

During the last week, students will have a chance to do independent work or a practicum on topics of their own interest. During the fall, Dr. Bossert can put students in touch with local academics and observers who can help develop the independent projects. Chilean residents in family medicine also attend the course and work with the Harvard students on projects. In recent years, students have done studies of tobacco legislation and of abortion that resulted in op-ed pieces in Chile's leading newspaper, other studies made impressive use of each student's special interests as applied to Chile. Open to all graduate degrees students; it offers a special opportunity for MPH students to do a practicum on specific issues in Chile

before, during and after the winter term course.

The three week course involves:

• intruductory lectures by Harvard Chan School faculty to orient students to the key issues of health reform and community medicine in Chile and to assist in teh selection of MPH practicum topics

• lectures by key participants in thehealth system - past and present

• interviews with current and past stakeholders and observers of the health system innnovations

• lectures and field visits to public and private clinics an dhospitals in urban and rural settings, including the Ancora public private partnership clinics

• individual short research projects on various topics such as health reform, community medicine, innovations in obesity, tobacco control, and other public health topics

The course requires a presentation on individual research into one of the topics of the course. Some students gain additional credit through an independent study in the spring term following the course.

Course Note: Enrollment is limited to 15 students;

Field Trip: Health Reform and Community Medicine in Chile (190416)

Instructor TBD

2013 Spring (1.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 15

This Winter Term course will allow students to see first hand two major current public health issues in a remarkable and exciting period of innovation in Chile: the process of reforming health systems and innovations in community medicine approaches, including the assessment of social capital initiatives.

Chile was one of the first countries on the continent to significantly reform its health system in the 1980s, introducing new programs of public and private social insurance schemes, promoting the growth of private sector providers and decentralizing their public health services. It has been a model for health reform in many other countries. Since the restoration of democracy in the 1990s, many in the health sector have been proposing new reforms to correct many of the problems that emerged in implementation of the initial

reforms.

A leader in promoting community-oriented health systems, Chile is also a laboratory of innovations in outreach programs, community participation, 24 hour emergency service units, and special programs for the elderly and other specific risk groups. Recent innovations in community medicine have been implemented by the Catholic University in pilot programs around Santiago. Complementing these programs is a research project to assess the role of social capital (trust in others and participation in voluntary groups) in health care services and health status.

The three week course involves:

?? introductory lectures by HSPH faculty to orient students to the key issues of health reform and community medicine in Chile?? lectures by key participants in the health reform process - past and present ?? interviews with current stakeholders and observers of the health reform process?? lectures and field visits to community medicine pilot clinics ?? individual short research projects on health reform, community medicine and/or social capital

null
null

The course will be for 1.25 credits and will require a power point presentation on individual research into one of the topics of the course. The course dates are January 3 to 21 - a beautiful summer time period in Santiago. Housing arrangements can be made at a reasonable price in university housing. Collective flight arrangements may also be possible. Spanish will be helpful but not essential.

Course Note: An orientation session will be held to discuss the course options with interested students.

At an important time in the implementation of Obamacare in the US, this Winter Term course will allow students to see first-hand Chile's innovative health reforms that were initiated in 2005 and are facing new challenges to their implementation. We will interview key actors in the process of adopting and implementing the reforms and discuss the new challenges posed by the Constitutional Court and the change in government administrations since the reforms were adopted. We will also observe Chile?ÇÖs innovative family medicine approach to primary care ?Çô complementing the recent refocus on primary care launched by WHO. Students will have a chance to do independent work on topics of their own interest. In previous years, students did studies of tobacco legislation and on abortion laws that resulted in op-ed pieces in Chile's leading newspapers, other studies made impressive use of each student's special interests as applied to Chile. MPH students will be able to use the course for their practicum with additional work during the fall and spring semesters.

The three week 1.25 credit course involves:

One advantage of Chile is a significant Harvard presence to support the course. The David Rockefeller Center for Latin American Studies has an office in Santiago and provides active support for this course. Two recent graduates from HSPH will be able to assist in the program: Dr. Thomas Leisewitz is on the faculty at the Catholic University in the Department of Community Medicine working on the community medicine pilots and social capital study; and Dr. Marco Nunez, a Congressional Representative and former Director of the decentralized Northern Metropolitan Santiago regional health office. In addition, the faculty director of the course, Thomas Bossert, Lecturer in Global Health and Population and Director of the International Health Systems Program, has had years of experience in Chile and direct involvement in some

- **introductory lectures by HSPH faculty to orient students to the key issues of health reform and community medicine in Chile**
- **lectures by key participants in the health reform process - past and present**
- **interviews with current and past stakeholders (including former President Lagos)and observers of the health reform process**
- **lectures and field visits to community medicine pilot clinics**
- **individual short research projects on health reform, community medicine and/or social capital**

of the health reform programs.

The course will be for 1.25 credits and will require a presentation on individual research into one of the topics of the course. The course dates are January 2 to 25 - a beautiful summer time period in Santiago. Housing arrangements can be made at a reasonable price at an apart-hotel near the David Rockefeller Center. Spanish will be helpful but not essential. One student will be selected as TA for the course. Total course costs $2,500 to $3,000 depending on individual plans to visit other parts of Chile or South America.

Course Note: Enrollment is limited to 15 students; pass/fail grading option only, although students who want more credit for their individual research are encouraged to follow up the course with an independent study in the Spring with Dr. Bossert. Two or three seminars on Chile will be held during Fall 2 in preparation for the course. Spanish will be helpful but not essential.

Field Trip: Health Reform and Community Medicine in Chile (190416)

Instructor TBD

2014 Spring (1.25 Credits)		**Schedule:**	TBD
Instructor Permissions:	Instructor	**Enrollment Cap:**	15

This Winter Term course will allow students to see first hand two major current public health issues in a remarkable and exciting period of innovation in Chile: the process of reforming health systems and innovations in community medicine approaches, including the assessment of social capital initiatives.

Chile was one of the first countries on the continent to significantly reform its health system in the 1980s, introducing new programs of public and private social insurance schemes, promoting the growth of private sector providers and decentralizing their public health services. It has been a model for health reform in many other countries. Since the restoration of democracy in the 1990s, many in the health sector have been proposing new reforms to correct many of the problems that emerged in implementation of the initial reforms.

A leader in promoting community-oriented health systems, Chile is also a laboratory of innovations in outreach programs, community participation, 24 hour emergency service units, and special programs for the elderly and other specific risk groups. Recent innovations in community medicine have been implemented by the Catholic University in pilot programs around Santiago. Complementing these programs is a research project to assess the role of social capital (trust in others and participation in voluntary groups) in health care services and health status.

The three week course involves:

?? introductory lectures by HSPH faculty to orient students to the key issues of health reform and community medicine in Chile?? lectures by key participants in the health reform process - past and present ?? interviews with current stakeholders and observers of the health reform process?? lectures and field visits to community medicine pilot clinics ?? individual short research projects on health reform, community medicine and/or social capital

The course will be for 1.25 credits and will require a power point presentation on individual research into one of the topics of the course. The course dates are January 3 to 21 - a beautiful summer time period in Santiago. Housing arrangements can be made at a reasonable price in university housing. Collective flight arrangements may also be possible. Spanish will be helpful but not essential.

Course Note: An orientation session will be held to discuss the course options with interested students.

Field Trip to Delhi, India (190417)

Richard Cash

Lindsay Jaacks

2018 Spring (1.25 Credits) **Schedule:** MTWRF 0900 AM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

The field course to New Delhi will take place during Winter Session. The purpose of this course is for students to familiarize themselves with issues of non-communicable diseases (NCDs) in New Delhi (population around 20 million) and India, which will soon have the largest population in the world. Students will be hosted by the Public Health Foundation of India (PHFI), which has an active research program on NCDs. PHFI has put together an excellent program that involves lectures, visits to implementation and policy agencies, as well as a number of field trips to programs both in the New Delhi area and beyond.

Course Note: Students who are enrolled in the MPH, SM, or doctoral program will be eligible. Pre-travel sessions will be organized during Fall 2 to review the health, culture, political, and socio-economic factors in India.

Requirements: **HSPH: HSPH Degr + PHD Stu**

Independent Study (190419)

Marc Mitchell

2016 Fall (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

An opportunity for independent study is offered for interested and qualified students or small groups of students. Arrangements must be made with individual faculty members and are limited by the amount of faculty time available. These programs are open to all students who wish to go beyond the content of the regular courses. The program provides an opportunity to consider the design of studies, programs, or analysis of data.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
ALL: Exclude from Canvas Feed	Exclude from Canvas Feed

Global Health & Population 300 Section: 99

Independent Study (190419)

Jennifer Leaning

2017 Spring (0.25 Credits) **Schedule:** TBD
